TRAIN: learn edit scores
APPLY: restore histories
Execute workflows
Orders, resources and timing; retries and cancellations.
Create observed training graphs
Vary fields; inject missing/wrong links and fragmented identities.
Fit and calibrate scorers
Generated reference labels plus budgeted verified histories.
fitted model
Read the observed graph
Recorded times, activities, fields and typed object handles.
Propose and apply edits
Retrieve candidates; add, remove, merge or abstain; refresh context.
Return histories and edit audit
Preserve recorded event content. Unresolved links may remain.
Reference identities supervise training; they are unavailable during inference.
